EDUCATION

University of Buenos Aires, Faculty of Engineering (FIUBA)

Computer Engineering In progress — 2 courses remaining
B.Sc. in Systems Analysis Graduated 2024

PROFESSIONAL SUMMARY

Data Engineer with 6+ years in data and hands-on experience building batch pipelines, ETL/ELT processes, and data lakes across banking, fintech, and pharmaceutical data. I work with PySpark, Airflow, S3, SQL Server, and GCP, with a focus on incremental processing, backfills, reconciliation, and data quality.

TECHNICAL SKILLS

Languages	Python, SQL	Databases	SQL Server, BigQuery, stored procedures
Big Data	PySpark, Spark		
Orchestration	Apache Airflow	Data Quality	schema validation, reconciliation
Storage	S3, Parquet, GCS	Tools	Git, GitLab CI/CD, Docker, Dataproc
Cloud	AWS, GCP	Learning	Databricks, dbt, Snowflake
		Languages	Spanish (Native), English (Advanced)

EXPERIENCE

Santander Tecnología Buenos Aires, Argentina
Data Engineer SSr Nov 2022 – Present

- Optimized a MODO stock pipeline in PySpark by replacing full historical scans with incremental processing over daily partitions; reduced compute time from ~2 h to ~20 min.
- Designed a multi-DAG Airflow solution for accounting reconciliation across 42 sources with an 18:00–06:00 ingestion window; moved operational close from 11:00 to 09:00.
- Built and maintain ~10 production Airflow DAGs for external API ingestion, customer table joins, and partition-level incremental backfills.
- Extended an internal PySpark library with type casting, null handling, and schema validation between bronze and silver layers, standardizing reusable data quality checks.

Equifax Buenos Aires, Argentina
Data Engineer Jan 2022 – Nov 2022

- Adapted Spark batch pipelines for the Cloudera on-premise to GCP migration (Dataproc, GCS, BigQuery), adjusting reads, writes, and incremental deliveries.
- Built a Python script for incremental extraction, decompression, and upload of files from Google Drive to GCS, unblocking a migration bottleneck.

IQVIA Buenos Aires, Argentina
Data Analyst Feb 2020 – Jan 2022

- Built ETL pipelines in SQL Server to transform relational pharmaceutical sales data into analytical models for reporting; automated monthly reporting cycles with stored procedures.

PROJECTS

Blockchain Royalty Platform ERC-1155, on-chain events, ABI, Hardhat, CI/CD B.Eng. FIUBA, 2025
Steganalysis with CNN Keras/TensorFlow, Next.js, Rust/WebAssembly B.Sc. FIUBA, 2024
